# Mobility Box Utility Storage Transport

## *BUST Box*

CREATIVE BUILDING PRODUCTS

Providing security solutions for a changing world since 1977.

A. Small BUST Box

B. Maximum space utilization

C. Weight is 1000 lbs

D. Capable of holding up to 2000 lbs

E. Stacked side-by-side

F. Stacked on top

G. Can be moved with a forklift

### Photo A & B

The **SMALL MOBILITY BUST BOX** (Box Utility Storage Transport) is manufactured from the **highest quality** Polyethylene plastic making it impervious to rot and rust. It is also water resistant. The dimensions of the Box are **41"W x 48"H x 50"L**. This specifically engineered size allows the maximum amount of space to be utilized on a standard 463L pallet. **These dimensions were specifically engineered for the most efficient utilization of the 463L Pallet.**

### Photo C & D

Unlike wooden and/or aluminum transport boxes the CBP Mobility BUST Box is **extremely durable with a strong structural design**. It will not chip, splinter or rot. It is **highly dent resistant** and, if damaged, can easily be repaired with a plastic repair kit. Note that this Mobility BUST box is capable of transporting up to **2000 lbs** of cargo as shown in photo D.

### Photo E & F

Designed to **maximize limited storage** and/or transportation space they can be stacked side-by-side or one on top of the other. Because of the **unique lid design**, each Box is able to **lock into the base** of the next Box when stacked on top of one another. This means that 2 stacked BUST Boxes have a combined height of **less than 95"**: a full inch under the maximum height requirement for a

As the Box is molded, a UV inhibitor is injected directly into the product making it **resistant to the stresses and fading** due to weather extremes. This innovation, along with the efficient utilization of space as these Boxes can be **stacked 4 high**, allows for **quick and easy long-term storage**.

### Photo G

Note the forklift pockets molded into the bottom allowing for easy operator access.

### Photo A & B

The **LARGE MOBILITY BUST BOX** (Box Utility Storage Transport) dimensions are **41"W x 48"H x 103"L**. This carefully engineered size means that a **standard 463L pallet** can hold four large BUST Boxes, eight small BUST Boxes, or any combination of the two sizes **and be under the maximum height requirement**. The photo in the upper right shows the product **easily supporting** a total weight of 4000 lbs.

A. 463L Pallet

B. Capable of supporting up to 4000 lbs

### Photo C & D

The tie down handles on each corner makes it **easier for the Load Master** to tie down and secure the Mobility Box. A unique feature is the **Drain Plug** that can be seen in photo D. In cases of high threat situations the BUST Box can be filled with water media and used as emergency protection. Once the threat situation is over simply drain the water.

C. Closeup of the tie downs

D. Carry Handles

### Photos E, F & G

There are a total of four recessed, **heavy steel carry handles**. This eliminates the problem of having the handles fall or be knocked off by rough handling. They are also positioned in order that several people can efficiently move an empty or even lightly loaded Box. The same **heavy steel handles** are on the lid making removal quick and easy.

E. Closeup of a TOP carry handle

F. Closeup of the SIDE Carry Handles

### Photo H

The velcro straps allow for **quick and easy latching** and unlatching of the lid. Because there are no cumbersome metal latches to break or bend, worries over pinched fingers, lost tie-downs, or clips have been eliminated! When the lid needs **secured** simply strap the velcro back in place.

G. Can be moved without equipment

H. Velcro straps tightly secure the lid

A. Forklift Ready

B. Closeup of the secure straps

### Photos A & B

The Mobility BUST Box is designed to **maximize efficiency**. Secured with velcro straps there is nothing to lose, break, or misplace. There are tie-downs on each corner in order to safely secure the cargo during transport. Manufactured from high density plastic it will not dent or crush during normal usage.

C. Easy on/off top

D. Large BUST Box Stacked

### Photos C & D

Once the velcro straps have been undone the lid can easily be removed using the **convenient carry handles**. The lid's **unique design** allows for the BUST Boxes to snugly "nest" on top of each other thus **reducing the risk** of injury or damage to personnel and cargo.

E. Stacked height is 95"

F. Designed to stack on together

### Photos E & F

Because of their **ability to interlock**, these Boxes can be stacked two, three, or even four high. Photos E and F shows two possible combinations of different BUST Box sizes being stacked on top of each other. Photo F shows **2 small BUST Boxes** stacked on top of **one large BUST Box** but the small Boxes could just have easily been on the bottom.

G. Forklift Accessible

H. Easily forklifted

### Photos G & H

Note the forklift pockets molded into the bottom allowing for easy operator access.

The CBP Large and Small Mobility BUST Boxes are manufactured in all colors with Olive Drab and Desert Tan being the most requested. Turn around is 30 days ARO.
