DEPLOYABLE , PLASTIC, HIGH THREAT **MOBILITY WALL**

Creative Building Products has designed a product that will enable troops in the field to safely and efficiently erect a force protection wall. Manufactured from highest quality Polyethylene plastic it is versatile, durable, lightweight, and effective. It will not crack, melt, peel, or fade from weather conditions and can be installed quickly, efficiently and expediently.

Each Mobility Wall is approximately 5 feet tall and highly versatile. The Wall can be utilized whether empty or filled with ballast. If used empty, multiple walls can provide protection from wind, blowing sand and grit, privacy in open places or they can be used to simply delineate separate sections. Once they've been filled with ballast they'll not only provide all the benefits listed above but will also provide a great deal of blast and ballistic protection from anything up to 7.62 mm rounds including shrapnel and flying debris.

The Wall will not generate any FOD or create a larger hazard by causing splintering or ricochet. Delivery is approximately 30 days ARO.

SPECIFICATIONS:

- No tools or hardware needed
- Sand Ballast
- Interior reinforced for added stability and protection
- Waterproof, Rustproof and Rot proof
- Color is Olive Drab or Desert Tan
- High Quality Construction
- Interior Bracing to Prevent Bowing
- Recoverable

A practical example of the Mobility Wall. Here it is shown protecting the troops from blast and ballistic threats and also protecting them from flying sand and debris.

Surround a Field Hospital, soldiers tents, command posts, temporary motor pools or any place where personnel or assets need protection.

Aside view of the Mobility Wall. Please note that two separate colors were used in order to visually demonstrate how the individual pieces fit together.

This particular wall is 36' long using 8' sections and offers a 180 degree fighting position. Sand or Water ballast can be added to strengthen the Wall and protect the soldiers behind it from blast and ballistic threats up to 7.62 mm rounds.

Manufactured of Polyethylene Plastic, the CBP Mobility Wall is rust proof, water resistant, and rot proof.

The removable lids on the top of the Wall are a fast, convenient, and easy way to place protective sand or dirt ballast inside the Walls.

This demonstration Wall is 36' long. The two light panels on the end are positioned in order to provide greater stability. Note the DFP formed by using two additional wall segments.

Wooden posts (4 x 4 x 8) can be placed in the openings at the end of each Wall for additional stability. For added security you can attach both barbed wire and concertina wire to the wooden posts. Note the 180 degrees of firing protection.

The Wall can be placed in such a manner that suspects may be temporarily detained when 4x4x8ft posts and barbed (or concertina) wire is in position.

12" Dumps are provided for fast removal of ballast. This allows the protective Mobility Wall to be quickly emptied and repositioned as needed.

One 4 x 4 x 8 wooden post has been utilized in this demonstration to show proper placement. Each individual Wall will hold a maximum of two posts.

Aerial view of the CBP Mobility Wall.

By using differently colored wall sections it is easily shown how the individual walls join together.

The Wall is versatile, durable, lightweight, and effective. When filled with ballast it will provide blast and ballistic protection or, when empty, it will provide protection from wind, blowing sand and grit and offer privacy in open places.
