

SLIDE BEAM GATE

The Slide Beam Gate is a unique concept on an old problem. How can you have a gate that can be extended as necessary with the same basic shape. The beam is painted alternating black and yellow. For high visibility at night or during unfavorable conditions, Prismatic reflective tape is included.

This gate slides on heavy duty roller with bogey support wheel in any length up to 40 feet. The common width is for a 16 foot opening however 4 feet sections can be added to increase gate length required. A robust construction and heavy duty materials using a common supplied tool set provides excellent protection, quickly installed.

The gate can be attached to the top of concrete barricades or gate frame supports are available.

Oh, by the way – the gate can be disassembled and moved on a common pallet for the next application – asset recoverable.
