## SECURITY FORCES SAFETY DRUM

Creative Building Product's Reflective Safety Drum is an excellent choice for all types of traffic and pedestrian control. It is safety orange in color and includes the option of four strips of high-intensity reflective sheeting that allows for excellent visibility both at night and in poor weather. When empty, the Drum weighs approximately 40 lbs but has the capability of holding an additional 75 lbs when sand is added for ballast. This extra ballast will enable the Drum to remain upright in case of high winds.

We have gone the extra mile to ensure that this product offers the highest level of protection; **it has been crash tested at 62 mph and is FHWA Type One approved.** The Reflective Safety Drum is manufactured from low-density polyethylene making it lightweight and easy to move. Unlike the common drum currently in use, the thicker plastic makes for a sturdy drum that will resist damage due to minor vehicle collisions. An added benefit is that it is constructed from one piece of plastic so there are no loose parts to become lost during storage or come apart during civilian or military applications.

The enlarged opening in the top of this product allows gloved workers an easy, comfortable, and secure grip. An optional flashing safety light can be positioned inside the opening on top that gives extra protection to the safety light and to the battery. The overflow hole located below the opening will prevent the light from being flooded during rain or snowstorms. And you don't need to worry about losing the light! **A great feature of the CBP Barricade is that the design allows the drums to be stacked on top of each other and stored without the time-consuming task of removing the safety light assembly.**

The unique, patented shape of the base is an innovative feature of the CBP's Reflective Safety Drum. The flat side on the base ensures that if the Drum is accidentally knocked over it will not roll into traffic but stay in basic position. The curved side of the base allows the user to easily maneuver the Drum into the correct work location. And if blown by high winds, or bumped into by a vehicle or pedestrian, the weighted bottom will help the Safety Drum to remain upright. If it does fall over the unique shape of the bottom will keep it from rolling into traffic or endangering any pedestrians

Creative Building Products strives to ensure the safest work environment possible. With that in mind, active duty servicemen, servicewomen, and civilians who have had hands-on experience utilizing this type of equipment were consulted and gave valuable design and specification input for this product. The Safety Drum is currently in production and can be shipped within thirty days of receipt of order. There are two types of reflective safety tape available as an option with this product. One option is the engineering grade reflective tape that is ideal for work zones with a minimum amount of vehicular traffic. The second option is the high reflective grade tape for the work zones that will have a high amount of vehicular traffic.

## **SPECIFICATIONS:**

- FHWA Type One Approved
- 45 lb weight
- Can hold up to 75 lb of ballast
- Constructed from one piece of high visible plastic
- Larger sized Drums can be stacked on top of each other without removing light assembly
- All colors available
- Unique shape of base prevents 'walking' in high wind and heavy traffic
- Sand is placed in bottom to eliminate the use of the unattractive "tire"
- Money saver since safety light is pre-installed
- Certified by the Department of Transportation

**Barricades being utilized in a non high threat situation.**

The CBP Safety Drum is manufactured in Safety Orange or Safety Yellow and includes the option of four strips of high-intensity reflective sheeting that will allow for excellent visibility both at night and in poor weather.

The Safety Drum has been crash tested at 62 mph and is FHWA Type One approved!

The enlarged opening in the top of this product allows gloved workers an easy, comfortable, and secure grip. An optional flashing safety light can be positioned inside the opening on top. This positioning gives extra protection to the light and to the battery.

The Drum is constructed from one piece of plastic so there are no loose parts to become lost during storage or handling. The unique, patented shape of the base is a great feature. The flat side on the base ensures that the drum will stay in its basic position and adding extra ballst will keep it from ‘walking’ in high traffic or high wind.

The overflow hole located below the opening will prevent the light from being flooded during rain or snowstorms.

You don't need to worry about losing this light! The innovative design allows the drums to be stacked on top of each other and stored without the time consuming task of removing the safety light assembly.
