DRAGONS TOOTH

Designed as a restrictive movement and traffic control device, this product is formidable, efficient and versatile. Unlike the bollard, the Dragon's Tooth is capable of being utilized as a single unit or chained together to create a temporary vehicle barrier.

To utilize the capability of controlling the flow of vehicular traffic, simply connect the individual Dragon's Tooth together by threading an optional steel chain or cable through the heavy-duty ring hooks on the rebar retainer posts. This will create a quick and efficient control system.

Available in Steel or Plastic.

REFLECTIVE SAFETY DRUM

CBP has gone the extra mile to ensure that this product offers the highest level of protection. It has been crash tested at 62 m.p.h. and is FHWA Type One approved. The unique, patented shape of the base ensures that if the Drum is knocked over it will not roll into traffic but stay in position. The curved side of the base allows the user to easily maneuver the Drum in to work position.

The enlarged opening in the top allows gloved workers an easy, comfortable, and secure grip. An optional safety light can be positioned inside the opening on top. Drums can be stacked without having to move the light.

Sand ballast can be added to the base for more stability.

STANCHION

The Stanchion is manufactured of rotationally molded plastic and uses water or sand as ballast. The 1/4" nominal thickness plus the weight of the ballast affords the unit more stability from high winds or jet blast.

This product is great for flight lines, sports events, parking lots, air shows, restricted areas and crosswalks. Just let your imagination take over! Can also be used for defensive cover and is small enough to go in a plane pod. The unit post has 3/8-16 stainless steel threaded insert molded in the top to allow for installation of a reflector, handles, signs, plastic tape or many other uses.

IMPALER

The High Threat Vehicle Barricade (Impaler) is manufactured from steel and is used to help deter or stop vehicles from entering your secured perimeter. This product can be used to create a formidable barrier that can cover an entry point or an entire road.

BLOCKOUTS FOR GUARD RAILS OR DUNNAGE

CBP Plastic Blockouts are manufactured from recycled material and will eliminate the basic need for wooden blockouts and for filling in dunnage spaces. They are ideally used for pallet and equipment support. They will not rot, split or attract insects.

Federal Highway Department of Transportation approved.

SAFETY DELINEATORS

CBP's patented Safety Delineator's provide a valuable safety service to automobile traffic by enhancing road markings in poor conditions such as fog, snow, low light and at night. The Delineator's offer a high degree of protection to walkers, runners, bicyclists, and drivers.

PLASTIC CAR STOPS SOLID AND/OR HOLLOW

The Solid Car Stop is manufactured of solid recycled plastic. The Car Stop is 6 foot long and weighs approximately 40 lbs.

The Hollow Car Stop is manufactured of polyethylene plastic and is also 6 foot long. Each unit weighs approximately 8 lbs empty and with water as ballast, approximately 32 lbs. full.

These products will not crack or crumble. Standard colors of Safety Yellow, Red, and Blue available.

PLASTIC SPEED BUMP

The Speed Bump is manufactured of solid recycled plastic in highly visible colors and is used for high traffic areas. The product is maintenance free and can be removed and repositioned to ease the problem of snow plowing or resurfacing. Each unit weighs approximately 32 pounds. The mounting hardware is included.

HEDGEHOGS & TETRAHEDRONS

The Hedgehog is used for anti terrorism and force protection in a variety of applications and configurations. Three pieces of 3' Long X 3/8" manufactured U.S. Steel complete the unit. The products is banded together and shipped as a single unit. Using the supplied hardware, the Hedgehog can be bolted together on site to create a barrier that is easily installed without engineering support.

A Chain Kit option is available.

The Tetrahedron is used for anti terrorism and force protection in many different applications. An added feature is the option of making two Hedgehogs out of one Tetrahedron.

Both units are shipped painted with a primer coat in a dark color.

VEHICLE INSPECTION PLATFORM

As a result of climbing in and out of truck and trailer beds, guards are not only getting dirty but also slipping and falling. Since the easiest way off the inspected vehicle is to jump down, the guards do a stiff jump which leads to sprained muscles, turned ankles, wrenched knees, pulled backs, and a host of other problems. The guard must also be taken off duty until the injury is healed resulting in a lost asset for the entire base.

The simple solution is to place the VIP at all gate entrances and containment areas. The problems mentioned above will be eliminated and you will have a safe and efficient way of inspecting incoming and outgoing vehicles.
