Vehicle Inspection Platform (VIP)

Creative Building Products is constantly striving to design products that will make the work environment a safer and more efficient place. We recognized the need to streamline and improve vehicle inspections and as a result we have designed our newest product, the Vehicle Inspection Platform (VIP). Currently, at all gate entrances; guards are required to visually inspect truck beds and trailers before allowing entry. These guards are routinely becoming injured because they must first climb or pull themselves up onto the truck bed to completely inspect the vehicle and then jump down once inspection is complete.

As a result of climbing in and out of truck and trailer beds, guards are not only getting dirty but also slipping and falling. Since the easy way off the inspected vehicle is to jump down, the guards do a stiff jump which can cause sprained muscles, turned ankles, wrenched knees, pulled backs, and a host of other problems. The guard must also be taken off duty until the injury is healed resulting in a lost asset for the entire base.

The simple solution is to place the VIP at all gate entrances and containment areas. The problems mentioned above will be eliminated and you will have a safe, efficient and more logical way to inspect incoming vehicles.

The features are:

- No tools necessary for assembly or disassembly
- No loose parts
- Can be moved or redeployed as necessary
- Is palletized for shipping
- Can be deployed on a 463L
- Easy leveling with use of included screw jacks
- Can be taken down and stored if desired
- Stable platform and work surface
- Simple to erect by hand with only one or two personnel
- Creates a high observation inspection point
- Needs no engineering support
- Can have lights attached
- Can have signs attached
- No equipment or power necessary for installation
- Modular for any added length necessary
- Made in the USA and Sold by Veterans

SPECIFICATIONS

Part #	Product Name	Weight
51303	Stair Kit	120 lbs
51503	Starter Kit (7ft long)	553 lbs
51803	Extension (7ft long)	<u>425 lbs</u>
		1098 lbs

Standard color is Safety Orange but any solid color can be ordered.

The Inspection Station is designed to fit onto one pallet for easy shipping to its destination. It will also fit onto a 463L for air mobility.

Assembly of the Inspection Station is quick and easy. The rails simply slide into place.

The Inspection Station is beginning to take shape.

The poles easily slide into place creating the backbone of a safe and stable walking platform.

The base of the Station is complete. No tools were needed for assembly.

This photo shows the aluminum ladder already installed and the upper level being constructed.

The upper level is constructed the same way as the base. The poles are simply slid into position.

Notice that the aluminum Step (Ladder) Section is being held steady with the use of screw jacks.

Photo showing assembly of the additional 7 foot length. Note that this additional length is optional.

This shows the Inspection Platform setup and ready to use. Note that this Platform has the optional 7 foot addition attached.

Platform setup and ready to use.

The Inspection Platform is ideal for inspecting small cars and the beds of small pickups.

It is also ideal for inspecting medium to large vehicles.

Heavy Duty trucks can be channelled and directed using the CBP Safety Drums.

The Platform makes it easy to quickly inspect inside the bed of a heavy duty truck.

If a closer inspection is required the two top bars can be removed allowing the inspector to easily step into the back of the truck and back out again.

The Inspection Platform will help to eliminate twisted ankles and other injuries resulting from jumping in and out of vehicles. Note how easy it is to step from the platform onto the truck and back out onto the platform.
